

# ALGEBRA 2 CURRICULUM

## Course 17006

The main portion of this course broadens the topics that were first seen in Algebra I. The students will continue to study probability and statistics along with a variety of functions. With successful completion of this course, the student will be properly prepared for a Trigonometry course.

### ALGEBRA 2 OUTLINE:

Goals	Skills	Summative Assessments	Time Frame	Main Resources
<ul style="list-style-type: none"><li>• Apply the order of operations in computation and in problem-solving situations.</li><li>• Simplify expressions involving polynomials.</li><li>• Describe and/or determine change.</li><li>• Analyze and/or use patterns or relations.</li><li>• Describe and/or determine families of functions.</li><li>• Analyze and/or interpret data on a scatter plot and/or use a scatter plot to make predictions.</li><li>• Apply probability to practical situations.</li></ul>	<ul style="list-style-type: none"><li>• Represent and/or use imaginary numbers in equivalent forms (e.g., square roots and exponents).</li><li>• Use exponents, roots, and/or absolute values to represent equivalent forms or to solve problems.</li><li>• Write and/or solve non-linear equations using various methods.</li><li>• Create, interpret, and/or use polynomial, exponential, and/or logarithmic functions and their equations, graphs, or tables.</li></ul>	Mid-year and End of Year Benchmark Assessments,	1-year	Glencoe Algebra 2 ©2014

## ALGEBRA 2 MAP:

TIME FRAME	BIG IDEAS	CONCEPTS	ESSENTIAL QUESTIONS	STANDARDS	OBJECTIVES	DIFFERENTIATION	ASSESSMENT
Week 1-2: Chapter 1: Equations and Inequalities	<ul style="list-style-type: none"> <li>• Symbols allow you to express mathematical concepts in a condensed form.</li> <li>• Mathematical relationships among numbers can be represented, compared, and communicated.</li> <li>• Mathematical relations and functions can be modeled through multiple representations and analyzed to raise and answer questions.</li> </ul>	1.1 Expressions and Formulas  1.2 Properties of Real Numbers  1.3 Solving Equations  1.4 Solving Absolute Value Equations  1.5 Solving Inequalities  1.6 Solving Compound and Absolute Value Inequalities	<ul style="list-style-type: none"> <li>• How are symbols useful in mathematics?</li> <li>• How can expressions, equations, and inequalities be used to quantify, solve, model, and/or analyze mathematical situations?</li> <li>• How are relationships represented mathematically?</li> </ul>	A1.1.1.5.1 Add, subtract and/or multiply polynomial expressions (express answers in simplest form – nothing larger than a binomial multiplied by a trinomial).  A1.1.1.5.2 Factor algebraic expressions, including difference of squares and trinomials (trinomials limited to the form $ax^2+bx+c$ where $a$ is equal to 1 after factoring out all monomial factors).  A1.1.1.5.3 Simplify/reduce a rational algebraic expression.  A1.1.2.2.2 Interpret solutions to problems in the context of the problem situation (systems of 2 linear equations only).  A1.1.3.1.1 Write or solve compound inequalities and/or graph their solution sets on a number line (may include absolute value inequalities).  A1.1.3.1.2 Identify or graph the solution set to a linear inequality on a number line.  A1.1.3.2.2 Interpret solutions to	<ul style="list-style-type: none"> <li>• 1.1: Use the order of operations to evaluate expressions</li> <li>• Use formulas</li> <li>• 1.2: Classify real numbers</li> <li>• Use the properties of real numbers to evaluate expressions.</li> <li>• 1.3: Translate verbal expressions into algebraic expressions and equations, and vice versa.</li> <li>• Solve equations using the properties of equality</li> <li>• 1.4: Evaluate expressions involving absolute values.</li> <li>• Solve absolute value equations</li> <li>• 1.5: Solve one-step inequalities.</li> <li>• Solve multi-step inequalities</li> <li>• 1.6: Solve compound inequalities.</li> <li>• Solve absolute value inequalities</li> </ul>	<ul style="list-style-type: none"> <li>• Leveled Worksheets (Study Guide and Intervention)</li> <li>• Skills Practice, Practice, Word Problems</li> <li>• Practice, Enrich</li> </ul>	Homework (Teacher Editions, Suggested HW at beginning of each problem set)  Participation  Quiz (Mid Chapter Quiz/Test)  Tests (Form 1, 2A, 2B, 2C)

				<p>problems in the context of the problem situation (systems of 2 linear inequalities only).</p> <p>A2.1.2.2.1 Factor algebraic expressions, including difference of squares and trinomials (trinomials limited to the form <math>ax^2+bx+c</math> where <math>a</math> is not equal to 0).</p> <p>A2.1.2.2.2 Simplify rational algebraic expressions.</p> <p>A2.1.3.2.2 Use algebraic processes to solve a formula for a given variable (e.g., solve <math>d = rt</math> for <math>r</math>).</p> <p>CC.2.2.HS.D.1 Interpret the structure of expressions to represent a quantity in terms of its context.</p> <p>CC.2.2.HS.D.7 Create and graph equations or inequalities to describe numbers or relationships.</p>

				<p>Use algebraic processes to solve a formula for a given variable (e.g., solve <math>d = rt</math> for <math>r</math>).</p> <p>A2.2.2.1.1 Create, interpret and/or use the equation, graph or table of a polynomial function (including quadratics).</p> <p>A2.2.2.1.2 Create, interpret and/or use the equation, graph or table of an exponential or logarithmic function (including common and natural logarithms).</p> <p>A2.2.2.1.3 Determine, use and/or interpret minimum and maximum values over a specified interval of a graph of a polynomial, exponential or logarithmic function.</p> <p>A2.2.2.1.4 Translate a polynomial, exponential or logarithmic function from one representation to another (graph, table and equation).</p> <p>CC.2.2.HS.D.10 Represent, solve and interpret equations/inequalities and systems of equations/inequalities algebraically and graphically.</p> <p>CC.2.2.HS.D.7 Create and graph equations or inequalities to describe numbers or relationships.</p>		<p>different regions of a graph of a system of inequalities,</p> <ul style="list-style-type: none"> <li>• Then have students use different colored pencils to shade the different regions of a graph defined by the inequalities in a linear programming problem. This should help students clarify the relationship between the various regions in these graphs</li> <li>• Extension Linear programming is a great lens for looking at effective business practice. Ask students to create a business similar to those mentioned in the Exercises. Students must determine their costs and profits for the chosen business and analyze the information to determine maximum profit options. Make the task more authentic by having students pursue a business that is of personal interest to them and estimate profit margins using the Internet as a resource.</li> </ul>	
--	--	--	--	---	--	--	--

						<ul style="list-style-type: none"><li>• If some students struggle with solving real-world problems using systems of equations in three variables,</li><li>• Then pair those students with students that are having success. Encourage students to explain to partners their explorations and plans for solving real-world problems using systems of three equations in three variables. Suggest that the listening partner take notes about the speaking partner's strategies, asking questions as needed for clarification.</li><li>• Extension The values in the table represent the sums of each row and column. Have students find the missing value. Then have students identify the values for each symbol or set of symbols. (Hint: Let each symbol or set of symbols represent one variable.)</li><li>• Verbal/Linguistic Learners Students may find it helpful to talk softly, or even silently, to themselves as</li></ul>	
--	--	--	--	--	--	--	--

						<p>they work with matrices. For example, they might recite the words "row by column" to remind themselves how to write the dimensions of a matrix. When multiplying by a scalar, students may find it helps to say, for example, "5 times 1 is 5, and 5 times negative 3 is negative 15." In this way, students use more than one of their senses to check their calculations.</p> <ul style="list-style-type: none"><li>• If students need more practice with matrices,</li><li>•</li><li>• Then have them use the class seating arrangement to form matrices, with each student's desk as an element. Have students make 24 large cards showing the values for the elements of two matrices. Form two matrices <math>A_{4 \times 3}</math> and <math>B_{3 \times 4}</math> with student seats and give each student sitting in these "matrices" a card to show the element in that position. Have students model</li></ul>	
--	--	--	--	--	--	--	--

						<p>the matrix multiplication <math>AB = C</math>. Begin by drawing a blank <math>4 \times 4</math> matrix on the board. For each element on matrix <math>C</math>, have students walk out the products, compute the sums, and then write the results in the correct locations of the matrix on the board.</p> <ul style="list-style-type: none"><li>• If students are using evaluation by diagonals for the first time,</li><li>•</li><li>• Then urge them to write down each step in the procedure. Have them compare their work with classmates to find any errors in either their calculations or their use of the procedure.</li><li>• If students wish to review the process of the manipulation of matrices,</li><li>•</li><li>• Then ask students to write a brief reflection on their reactions to the various methods they have learned involving the manipulation of matrices. Ask them to comment on what aspects they found efficient and helpful, and</li></ul>	
--	--	--	--	--	--	--	--

						<p>what aspects they found to be difficult or confusing.</p> <ul style="list-style-type: none"> <li>• Logical Learners Ask each student to write a comparison of the inverse of a matrix to the multiplicative and additive inverses of a number.</li> </ul>	
<p>Week 10-12 Quadratic Functions and Relations</p>	<ul style="list-style-type: none"> <li>• From the placement of a quadratic graph, you can see whether there are 0, 1, or 2 real solutions. The symmetry of the graph helps you identify a second solution when one solution is found.</li> <li>• If the equation has terms that you know are easily factorable, you could solve by factoring. If the equation has more complex terms, you could solve by using the Quadratic Formula, completing the square, or by graphing. You could also use one method to solve and a second method to check your answer.</li> </ul>	<p>4.1: Graphing Quadratic Functions</p> <p>Extend 4.1: Graphing Technology Lab: Modeling Real-World Data</p> <p>4.2: Solving Quadratic Equations by Graphing</p> <p>Extend 4.2: Solving Quadratic Equations by Graphing</p> <p>4.3: Solving Quadratic Equations by Factoring</p> <p>4.4: Complex Numbers</p> <p>Extend 4-4: Algebra Lab: The Complex Number Plane</p> <p>4-5: Completing the Square</p> <p>Extend 4-5: Graphing Technology Lab: Solving Quadratic Equations</p> <p>4.6: The Quadratic Formula and the</p>	<ul style="list-style-type: none"> <li>• How can the graph of a quadratic function help you solve the corresponding quadratic equation?</li> <li>• How do you know what method to use when solving a quadratic equation?</li> </ul>	<p>A1.1.1.5.1 Add, subtract and/or multiply polynomial expressions (express answers in simplest form – nothing larger than a binomial multiplied by a trinomial).</p> <p>A1.1.1.5.2 Factor algebraic expressions, including difference of squares and trinomials (trinomials limited to the form <math>ax^2+bx+c</math> where <math>a</math> is equal to 1 after factoring out all monomial factors).</p> <p>A1.1.1.5.3 Simplify/reduce a rational algebraic expression.</p> <p>A1.1.2.1.1 Write, solve and/or apply a linear equation (including problem situations).</p> <p>A1.1.2.1.2 Use and/or identify an algebraic property to justify any step in an equation solving process (linear equations only).</p> <p>A1.1.2.1.3</p>	<ul style="list-style-type: none"> <li>• 4.1 Graph quadratic functions.</li> <li>• Find and interpret the maximum and minimum values of a quadratic function.</li> <li>• Extend 4.1 Use a graphing calculator to model data points for which the curve of best fit is a quadratic function.</li> <li>• 4.2 Solve quadratic equations by graphing.</li> <li>• Estimate solutions of quadratic equations by graphing.</li> <li>• Extend 4.2 Use a graphing calculator to solve quadratic equations.</li> <li>• 4.3 Write quadratic equations in standard form.</li> <li>• Solve quadratic equations by factoring.</li> <li>• 4.4 Perform operations with pure imaginary numbers.</li> <li>• Perform operations with complex numbers.</li> <li>• Extend 4.4 Graph complex numbers in</li> </ul>	<ul style="list-style-type: none"> <li>• If students struggle to solve real-world problems involving maximum or minimum values,</li> <li>• Then encourage students to explain to partners their plans for solving. Suggest that the listening partner take notes about the speaking partner's strategies, asking questions as needed for clarification.</li> <li>• <b>Visual/Spatial Learners</b> Provide students with a variety of parabolas. Ask students to sort the parabolas into three piles: those that model a quadratic equation with one real solution, those that model a quadratic equation with two real solutions, and those that model a quadratic equation with no real solutions. Finally, ask students to</li> </ul>	<p>Homework (Teacher Editions, Suggested HW at beginning of each problem set)</p> <p>Participation</p> <p>Quiz (Mid Chapter Quiz/Test)</p> <p>Tests (Form 1, 2A, 2B, 2C)</p>
